

## **ADJUSTABLE SPEED DRIVES**

# Reliable & Configurable

## Reliable

Toshiba has manufactured pulse-width modulated drives since 1981 and is one of the few companies that manufactures both motors and drives in the same facility. Because of this, Toshiba has the knowledge to develop and manufacture the most powerful, efficient, and motor-friendly adjustable speed drives available.

Toshiba produces one of the most reliable and rugged adjustable speed drives in the industry. Users can rely on Toshiba drives working for years beyond their warranty.

The Q9 is no exception — it is built to last. Toshiba uses oversized transistors and heavy-duty DC bus capacitors to extend the drive's life. The Q9 is listed at 100,000 AIC interrupting capacity. The drive is also designed to operate in environments from -10° to 40°C at elevations up to 3,300 feet.

Integrated Enclosure

# **Configurable**

The Q9 is not only a monster in durability and dependability, but also simple to use. The electronic operator interface (EOI), with its LCD display and simple keypad layout, allows for quick and easy menu and parameter navigation. Toshiba even provides optional Windows®-based software to help with Q9 programming and monitoring.

With eight digital inputs, three digital outputs, three analog inputs, two analog outputs, EOI, and various communication protocol options, the Q9 allows for flexibility in controlling and monitoring the drive.

My Function is a Q9 feature that allows the user to access built-in PLC-type logic. My Function provides basic logic programming without the need for an external PLC.

# **HVAC-Minded**

## **Designed for HVAC Systems**

The Q9 ASD is designed for HVAC systems offering many popular features needed in the industry. It comes equipped with a fire-speed circuit that forces the drive to run at a preset speed during a smoke purge. The Q9 also provides a damper-permissive function that can be used to protect from over-pressuring ductwork.

A user can set a low-output disable time to force the drive to zero-speed if the drive runs at the lower limit frequency for a specified time. This option helps reduce energy costs.

### **PID Control**

A built-in proportional/integral/derivative (PID) controller, used to regulate a process without the need for external control devices, comes standard with the Q9. In addition, the wire-break function trips the drive if the feedback signal drops below specified levels. This prevents the drive from accelerating to maximum speed and helps protect the system.

# **Communications**

The Q9 supports many common protocols used in HVAC applications including:

- BACnet (MS/TP)®
- LonWorks<sup>®</sup>
- Metasys N2<sup>®</sup>
- Modbus RTU<sup>®</sup>
- APOGEE FLN®

# System-Friendly

The Q9 includes multiple features in its standard design that protects the drive, your equipment, and your systems.

#### **Alarms & Faults**

The Q9 provides various alarms and fault-notifications that serve to alert the user when poor operating conditions are present. This capability not only protects your drive but also protects the motor that is connected to it.

# **Equipment Friendly**

The Q9's speed search function can detect the speed and direction of a spinning motor and start smoothly without tripping. This drive feature proves especially useful when trying to start a motor after a momentary power outage or in the case of a free-wheeling fan.

Adjustable acceleration/deceleration times and stall capabilities allow for minimal stress on fans, pumps, belts, and pulleys.

The Q9 is capable of programming up to three different skip frequencies. User-selected frequencies may be "skipped" to avoid the negative effects of mechanical resonance.

#### **ASD Pro Software**

Toshiba offers downloadable software that can be used to interface with the Q9 at no additional cost. The software can be used to program and control the Q9, download parameter sets, and monitor real-time conditions.

# Integrated Enclosure & Extender Box

Toshiba allows you to "build your own drive" by including many of the popular features requested by the HVAC market as choices for your own standard package. The configurations you can choose include line reactors for input power-conditioning and harmonic mitigation, as well as the choice between two or three-contactor bypasses to allow for across-the-line motor operation.

Integrated Enclosure Dimensions							
	Without Reactor						
230 V	3 to 7.5 HP	10 to 25 HP					
460 V	3 to 15 HP	20 to 40 HP					
Height (in.)	28.5	45.5					
Width (in.)	16.1	16.1					
Depth (in.)	10.6	13.9					

## **Integrated Enclosure**

"Build your own drive" uses a standard NEMA 1 enclosure that is available with the following options:

- Input Circuit Breaker
- Two-Contactor Bypass
- Three-Contactor Bypass
- 3% AC Line Reactor
- 5% AC Line Reactor
- DC Link Reactor

#### **Extender Box**

The extender box includes the same options for line reactors and bypass configurations as the integrated enclosure. The extender box is connected to the bottom of the standard Q9 power unit, and the entire assembly is NEMA 1 rated.

	Bypass Box Dimensions									
	Without	Reactor	With Reactor							
230 V	30 HP	40 HP		30 HP	40 HP					
460 V		50 to 100 HP	50 to 60 HP	terrer La Banda	75 to 100 HP					
Height (in.)*	35.5	36.3	36.3	40.5	41.3					
Width (in.)	16.0	16.0	16.0	16.0	16.0					
Depth (in.)	12.5	12.5	12.5	12.5	12.5					

<sup>\*</sup> Height does not include power unit dimension.

# Layout & Enclosure

#### **LCD Display**

Displays Configuration Information, Performance Data, and Diagnostic Information

#### **Option Card Status LEDs**

Shows Stackable Option Card Status LEDs When Options are Installed

#### **LOCAL/REMOTE Key**

Toggles System to and from Local/Remote Modes; LOCAL/REMOTE Key Light Illuminates Green While in Local Mode

#### **RUN Key**

Issues Run Command While in Local Mode; RUN Key Light Illuminates Red While Running and Green While Stopped

#### **Panel Door**

Allows Easy Access to Control Terminal Strip

#### Rotary Encoder

Accesses the Q9 Menu Selections, Changes Parameter Values, and Performs Enter Function; Up and Down Functions Operated by Rotating Encoder

#### **ESCAPE Key**

Returns System to Previously Viewed Menu Item

#### **MODE Key**

Provides a Means to Access Five Root Menus

#### STOP/RESET Key

Issues Off Command While in Local Mode; Initiates Emergency-Off if Pressed Twice Quickly; Resets Active Faults and/or Alarms if Pressed Twice Quickly

#### Panel Locking Screw

Allows for Simple Front-Panel Locking and Unlocking
